Tips and Tricks for Windows 10 and 11

Mastering the Start Menu

Both Windows 10 and 11 have made significant changes to the Start Menu. For example, in Windows 10, apps and tiles can be pinned to the Start Menu for quick access. In Windows 11, the Start Menu is now centered, offering a minimalist design that is easy to navigate. You can also use Live Tiles to access real-time updates in your favorite apps.

Task View and Virtual Desktops

Improve your efficiency by utilizing Task View (Windows+Tab) to transition between applications quickly. Utilize Virtual Desktop (Windows+Ctrl+D) to organize your work into distinct desktops, thereby reducing the clutter in your workspace.

Snap Assist for Enhanced Multitasking

Snap Assist simplifies the process of multitasking. By dragging an open window along the edge of the screen, Windows will prompt users to open a second window that will take up the remaining half of the screen. This allows users to focus on multiple applications at once without having to adjust the size of their windows constantly.

Master the Taskbar and Start Menu

The taskbar serves as the focal point of the user interface. It is the place where users can pin their most frequently used applications for easy access. Windows 11 has implemented a redesign of the Start Menu, resulting in a more efficient and streamlined experience. Additionally, users can access updates in real time through Live Tiles.

Optimize Windows Explorer

Windows Explorer provides users with a convenient way to access files and folders. To create a new folder, users can press Ctrl+Shift+N. Additionally, pressing Ctrl+E will activate the search bar, allowing users to locate specific files or applications more easily.

Cortana, Your Digital Assistant

Microsoft's virtual assistant, Cortana, is included in Windows 10 and 11. It can be used to set reminders, check the weather, and answer trivia questions, and it can be a useful tool for productivity when used correctly.

Focus on Microsoft Store Apps

Check out the Microsoft Store if you're looking for apps that are designed specifically for Windows 10 or 11. They'll give you a better experience and better compatibility with your computer.
